Re: Enhanced 911 Status Report

Dear Messrs. Sugrue and Solomon:

Verizon Wireless hereby submits its quarterly status report documenting the progress of its efforts to deploy Phase II Enhanced 911 ("E911") capabilities, as required by the Commission's *Order* granting Verizon Wireless a waiver from certain Phase II E911 obligations.¹ Should you need additional information, please contact the undersigned.

Sincerely,

John T. Scott, III

¹ *In the Matter of Revision of the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems*, Request for Waiver by Verizon Wireless, CC Docket No. 94-102, ("Order"), 16 FCC Rcd. 18634 (2001).

E911 Status - Quarterly Report May 1, 2002

SUMMARY

In its *Order* released October 12, 2001, the FCC granted Verizon Wireless a waiver of section 20.18(g) to extend the E911 Phase II implementation and handset sales milestones.² Verizon Wireless has met the handset deployment milestones that have occurred. As to network deployment to support the Assisted GPS solution, Verizon Wireless has completed the software loads and testing necessary and is presently able to support E911 Phase II service requests in its Lucent markets where it serves 155 million residents. Verizon Wireless has also deployed an EFLT solution in the Lucent software loads commensurate with deployment of AGPS/AFLT to individual PSAPs. Verizon Wireless completed an FOA of the Assisted GPS solution in York County, VA on April 8, 2002 and in the state of Rhode Island on April 15, 2002. Both areas are live with the AGPS/AFLT Phase II solution and the EFLT interim solution. In addition to the three counties in Indiana and Illinois where Verizon Wireless successfully deployed Phase II service using an interim network solution, it has deployed the necessary network infrastructure for Phase II to Harris County, TX, Chicago, IL and St. Louis, MO. As of April 15, 2002, Verizon Wireless has deployed Phase I service to over 1,350 PSAPs throughout the country.

I. HANDSET DEPLOYMENT

The *Order* required Verizon Wireless to begin selling and activating AGPS/AFLT capable handsets no later than December 31, 2001. Verizon Wireless met that requirement, and no additional handset deployment milestones have occurred.

- December 27, 2001: Verizon Wireless began selling and activating an AGPS/AFLT handset model, the Samsung model SCH-N300. Verizon Wireless will soon supplement the initial Samsung product with other products as they become generally available, which is anticipated in the second quarter of this year. These products will be available through the Verizon Wireless online store at www.verizonwireless.com and will also be sold in retail outlets.

² In its pending petition for reconsideration of the *Order*, VZW demonstrated that the *Order's* reporting requirements are not valid because the Commission failed to obtain approval from the Office of Management and Budget for this information collection pursuant to the Paperwork Reduction Act. Petition for Reconsideration, filed November 13, 2001, at 13-15. No party opposed VZW on this point. The Commission has not yet acted on VZW's petition for reconsideration. Accordingly, while VZW files this report, it continues to believe that the Commission must follow PRA procedures before it can properly request this and future reports.

II. AGPS/AFLT NETWORK DEPLOYMENT

As Verizon Wireless indicated in its waiver petition, many parts of the wireless communication system – handset, cell site, switches, location PDE – must all interface to provide seamless voice and location data. The following summarizes the progress Verizon Wireless has made along with its cell site, switch, and PDE infrastructure vendors toward meeting the deployment benchmarks required by the FCC.

A. Lucent Network Components– Verizon Wireless has successfully met the April 1st deadline for implementing software upgrades to the portions of the network served by Lucent switches. Verizon Wireless has completed the software loads and testing necessary to support the Assisted GPS solution and is presently able to support E911 Phase II service requests in its Lucent markets where it serves a population of 155 million residents.

- Lucent 17.0 switch software release SU4 is necessary for AGPS/AFLT. Software release SU4 and release SU6 which contains additional software improvements have been loaded in all Lucent switches.
- Lucent 17.10 cell software has been loaded in over 11,500 of Verizon Wireless' Lucent cells. Hardware issues in just three cell sites prevented VZW from loading cell software but they will be loaded within the next few weeks.
- First Office Application interoperability tests of the Lucent network components operating with the Compaq PDE have been completed with two PSAPs. Two PSAPs, York County, VA and the State of Rhode Island, are now live with Phase II service. York County, VA went live with Phase II service on April 8, 2002 and the state of Rhode Island went live with Phase II service on April 15, 2002.
- Verizon Wireless is presently deploying Phase II service to PSAPs in its Lucent markets. Two issues may impact our ability to provide service to all the pending Phase II requests before December 31, 2002: PSAP readiness and LEC readiness. Verizon Wireless is encountering deployment delays when, at the time it is ready to perform final system calibration, the PSAP's CPE is not capable of receiving and using the Phase II data stream, and/or when the local exchange carrier is unable to provide ALI Pull capability.

B. Nortel Network Components – Verizon Wireless and Nortel are working towards meeting the August 1st deadline for implementing software upgrades to the network.

- Verizon Wireless completed interoperability testing between the Nortel MSC, Intrado MPC and the Compaq PDE. The first end-to-end testing with PSAPs in Nortel markets is being scheduled.

C. EFLT Interim Solution – Verizon Wireless has successfully met the April 1st deadline for deploying an interim EFLT product in the Lucent-switched part of its network.³

- EFLT is provided through software changes to both switches and to the PDE. For Lucent markets, the switch software containing EFLT capability has been loaded in all Lucent switches and is operational in the Phase II systems in York County, VA and Rhode Island.
- In the February report, Verizon Wireless stated that Nortel did not support EFLT in its switching infrastructure and was embarking on a development effort. Since that time, Nortel has announced the availability of an EFLT feature. On April 9, 2002, Verizon Wireless supplemented its petition for reconsideration regarding the timeframes needed for Nortel to test and deploy an EFLT product throughout the network. Verizon Wireless expressly incorporates the information from its April 9, 2002 supplement herein, including the supporting letter from Nortel.
- Motorola's EFLT product will not be available soon enough to serve as an interim solution, especially given the timeframes for completion of the AGPS/AFLT solution in Motorola markets and the availability of compliant handsets. Motorola would not be able to develop and release an EFLT product for testing until the end of 2004, with full deployment in early 2005.

III. INTERIM NETWORK DEPLOYMENTS

Verizon Wireless was required to install interim, network-based technology in certain counties where it had received Phase II requests. By December 31, 2001, Verizon Wireless was required to provide Phase II capability to 100% of the area served by the requesting PSAPs in St. Clair County, IL and Lake County, IN. In addition, by April 1, 2002, Verizon Wireless was required to install a network-based technology to provide Phase II capability to 100% of the area served by the requesting PSAPs in Chicago, IL,

³ In the waiver *Order*, the FCC stated that on or before April 1, 2002, Verizon Wireless must deploy the EFLT Phase II solution, with an accuracy on average of within 250 to 350 meters, without assistance of a modified handset, in all Lucent and Nortel switched markets. *Order*, 16 FCC Rcd. 18634 at ¶ 44 (2001). Verizon Wireless's petition for reconsideration requested modification of the EFLT condition of its waiver, because EFLT was an untested and unproven technology that should not have been converted into a binding requirement. The EFLT mandate is particularly unwarranted given the accuracy range required, which was unsupported by record evidence. Verizon Wireless sought reconsideration to eliminate the accuracy reference. In addition, Verizon Wireless filed a supplement to its petition on April 9, 2002, buttressing the request to remove the accuracy range with information regarding technical limitations, explaining how the interim EFLT solution will work to improve upon Phase I data in some cases, and supporting the need for a revised deadline of March 31, 2003, to implement EFLT in Nortel switched markets.

Cook County, IL, St. Louis County, MO, and Harris County, TX. Verizon Wireless has successfully met the December 31st and April 1st deadlines.

- December 31, 2001: Verizon Wireless completed deployment of its interim network solution to provide Phase II service to 100% of the area served by the St. Clair County, Illinois (St. Louis) and Lake County, Indiana (Gary-East Chicago) PSAPs. (Phase II service had been partially turned up in these two markets in October 2001.)
- April 1, 2002: Verizon Wireless has completed deploying the network infrastructure in Chicago, Illinois, Cook County, Illinois (Chicago), St. Louis County, Missouri (St. Louis) and Harris County, Texas (Houston). Phase II service was turned live in Cook County as of April 1, 2002. As VZW reported in February, the Chicago and Harris County PSAPs have asked Verizon Wireless to delay the live activation until their requested enhancements are made to provide capability for routing calls with Phase II data. These enhancements are due to be completed in May.
- Verizon Wireless is still experiencing a problem in ordering facilities from Southwestern Bell Telephone Company in St. Louis. SWBT will not install facilities for Verizon Wireless until it receives confirmation that its charges for the selective router will be paid. To date, the PSAP has declined to pay such selective router charges. This problem has prevented Verizon Wireless from activating the Phase II technology it deployed in St. Louis County.

IV. PSAP DEPLOYMENT

As part of this status update regarding Verizon Wireless' Phase II compliance efforts, the FCC requested information regarding all pending Phase I and Phase II requests. The various attachments provide the status of the progress of Phase I and Phase II requests as of April 15, 2002. Deploying E911 services is a complex and multi-faceted process that requires cooperation and coordination between multiple parties.

- **Attachment A** provides a list of the more than 1,350 PSAPs who are presently receiving Phase I Service from Verizon Wireless and demonstrates Verizon Wireless' continued commitment to providing E911 service.
- **Attachment B** contains a list of requests for Phase I Service that Verizon Wireless is presently working on, the status of deployment milestones documenting progress to date, comments on the reasons for the deployment status, and anticipated in-service dates. Each deployment initiative has the potential to present as many different issues as there are PSAPs. Nonetheless, in the in-progress Phase I deployment chart found as Attachment B, Verizon Wireless has attempted to distill its experiences regarding each request by: 1) identifying

industry-accepted “deployment milestones” to advise the Commission as to the stages in the deployment process the parties have completed and what remains to be done; and 2) supplying comments that provide further information, albeit not exhaustive, regarding the types of issues that arise in the course of these deployments. The comments cataloging the various issues beyond Verizon Wireless’ control can be summarized as follows:

PSAPs: Despite having requested Phase I service, there are a variety of reasons why some PSAPs have not been able to work aggressively with Verizon Wireless or the vendors to complete deployment of the service. In these instances, Verizon Wireless tries to move forward to the degree possible. The chart demonstrates Verizon Wireless’s effort to complete some milestones. Reasons cited in this report include:

- (1) PSAP has not responded to multiple requests for information or approval of the deployment plan for an otherwise valid request.
- (2) PSAP is awaiting the provision of separate wireless trunks from the selective router to the PSAP.
- (3) PSAP uses a stand alone ALI database that requires additional time and effort to establish the data connection required to receive and use the location information. The ALI database must be capable of “steering” so that it can query the Mobile Positioning Center (“MPC”) for an NCAS solution, must contain ports, and must maintain a constant connection with the MPC. Many stand-alone ALI databases must undergo time- consuming upgrades to achieve these capabilities.
- (4) PSAP is awaiting a CPE upgrade.
- (5) PSAP refuses to accept the service without a contractual agreement (even though there is no cost-recovery reimbursement for carriers) or without an agreement to provide a customized solution for their particular equipment or configuration.

911 Service Provider (Local Exchange Carrier): In some cases, the LECs are declining to provision trunk orders until an interconnection agreement amendment is finalized to cover E911 services. As indicated above in Section III, disputes with LECs over the appropriate party to bill for various network selective router charges has also delayed implementation. Another reason for delay is the need for LECs to complete infrastructure upgrades, usually involving the selective router, before provisioning E911.

State 911 Authority: A few state 911 authorities have asked Verizon Wireless to provide a “Proof of Concept” demonstration before they will authorize deployments in the state. This process can significantly forestall meeting the six-month deployment window, especially if the 911 authority is testing with multiple carriers on a sequential basis. Even if a demonstration is not required, some authorities must approve a carrier’s deployment plan before work can proceed, or have undertaken the responsibility to order trunks or

otherwise manage the deployment process on behalf of the PSAPs within the state themselves.

- **Attachment C** contains a list of requests for Phase II Service. The FCC has required Verizon Wireless to complete all valid PSAP requests received on or before June 30, 2002 by December 31, 2002, except in markets served by Motorola switches. The previous three sections of this report detail Verizon Wireless' efforts to test and deploy the network upgrades in Lucent and Nortel markets as prescribed by other conditions of the waiver *Order*. As the Lucent and Nortel switched markets become capable of providing Phase II service, Verizon Wireless will work with the vendors, LECs, and the PSAPs to deploy the service by December 31, 2002 for those requests received by June 30th. As those deployments begin, subsequent reports will provide information regarding the status of each request.

DECLARATION OF RICHARD J. LYNCH

I have read the foregoing E911 Quarterly Status Report. I declare under penalty of perjury that the foregoing is true and correct. Executed on 4/24, 2002.

A handwritten signature in black ink, appearing to read "Richard J. Lynch", written over a horizontal line.

Richard J. Lynch
Executive Vice President and
Chief Technical Officer
Verizon Wireless

Certificate of Service

I hereby certify that on this 1st day of May copies of the foregoing E911 Quarterly Status Report in CC Docket 94-102 were sent by first-class mail to the following parties:

John Ramsey

In-Progress Requests
April 15, 2002**

Attachment B

State	County	Requesting Entity	Request Date	Milestone Status	Anticipated In-Service Date	Comments
Milestones: 1-MSC Configuration 2-Cell Site Sector & RF Data 3-SS7 Gateway 4-MSC Integration 5-Traffic Plans 6-Voice Trunks						

Note: Front-End Milestones
1 - MCS Configuration - Information provided by VZW on their MSC location, signalling, contacts, etc.
2 - Cell Site Sector & RF - Defines the MSC and individual cell site sector footprint. Required to engineer and coordinate PSAP boundaries
3 - SS7 Gateway - Required to Signal between the MSC and the Wireless 911 Service Provider SCP
4 - MSC Integration - Tests the signalling between the MSC and the Wireless 911 Service Provider's SCP
5 - Traffic Plans - Engineered by the Wireless 911 Service Provider to coordinate with the PSAP, load the MSAG to the ALI Database, and load to the databases associated with the SCP
6 - Voice Trunks - MSC to S/R must be in-place to deploy WE9-1-1 Phase I service
